HR Mock Interview

Olga Sycheva | Software Engineering | Career Sprint

November 10, 2026 · 6:26–6:48 PM Hungary Time / 12:26–12:48 PM ET

FULL TRANSCRIPT

AI Interviewer · 06:26 PM Hungary Time · 12:26 PM ET

Hi! I'm your AI interviewer for the HR Mock Interview. This is a required interview for your Career Sprint, and I'll ask you a set of questions one at a time. Take your time. Are you ready to begin?

You · 06:26 PM Hungary Time · 12:26 PM ET

Yes.

AI Interviewer · 06:26 PM Hungary Time · 12:26 PM ET

Wonderful. Let's get started.

What are you looking for in your next opportunity?

You · 06:26 PM Hungary Time · 12:26 PM ET

What do you mean?

AI Interviewer · 06:26 PM Hungary Time · 12:26 PM ET

Sure, happy to clarify. I'm asking what you're hoping to find in your next job or role. For example, what matters to you as you think about where you want to work and what you want to be doing?

You · 06:27 PM Hungary Time · 12:27 PM ET

I'm looking for a junior full-stack developer position. I would like to work with React, Node, API, and databases. I enjoy solving problems, building useful features, and learning from experienced developers.

AI Interviewer · 06:27 PM Hungary Time · 12:27 PM ET

Thank you. You mentioned enjoying learning from experienced developers. Can you walk me through a specific time when that kind of mentorship or learning from someone more experienced made a real difference for you?

You · 06:27 PM Hungary Time · 12:27 PM ET

Through the time when I'm studying in Triple Ten.

AI Interviewer · 06:27 PM Hungary Time · 12:27 PM ET

Got it. Can you tell me more about what happened during that time specifically, what you learned and from whom, and how it shaped you?

You · 06:27 PM Hungary Time · 12:27 PM ET

Give me a second, please.

AI Interviewer · 06:27 PM Hungary Time · 12:27 PM ET

Of course, take your time.

You · 06:28 PM Hungary Time · 12:28 PM ET

During my Triple Ten program, I received feedback from experienced code re- reviewers. For example, IRV point out problems with my portfolio deployment and explain what needed to be improved. I used that feedback to better understand deployment and testing. It helped me to pay more attention to details and check my work from the user's perspective.

AI Interviewer · 06:28 PM Hungary Time · 12:28 PM ET

Thank you. That's a good picture of that experience. Now, shifting gears a little, what drew you to full-stack development specifically, or to the tech industry more broadly?

You · 06:28 PM Hungary Time · 12:28 PM ET

...

AI Interviewer · 06:28 PM Hungary Time · 12:28 PM ET

Take your time. Would you like me to repeat the question?

You · 06:28 PM Hungary Time · 12:28 PM ET

Yes.

AI Interviewer · 06:28 PM Hungary Time · 12:28 PM ET

Of course. What drew you to full-stack development, or to the tech industry more broadly?

You · 06:29 PM Hungary Time · 12:29 PM ET

I've always enjoyed solving problems and understanding how things work. I choose full-stack development 'cause I like working on both the front end and back end, and seeing how everything connects. I also enjoy learning new technologies and building something useful from the scratch.

AI Interviewer · 06:29 PM Hungary Time · 12:29 PM ET

Thank you. You mentioned liking how the front end and back end connect. Can you think of a specific moment, maybe during a project, when you felt that connection click for you and found it particularly satisfying?

You · 06:29 PM Hungary Time · 12:29 PM ET

Yes. During my Workspace Hub project, I worked on adding task comments and connecting the front end to the API and database. When I saw that users could add comments and the data was saved and displayed correctly, everything started to make sense. It was really satisfying to see how all the parts worked together.

AI Interviewer · 06:29 PM Hungary Time · 12:29 PM ET

Got it. Okay, let's turn to something a little different. Tell me about a time you had a disagreement with a colleague or manager. How did you handle it?

You · 06:30 PM Hungary Time · 12:30 PM ET

I haven't had a major disagreement with a manager in software development yet, but, uh, during my Triple Ten projects, I sometimes received feedback that was different from my original approach. I tried to understand the other person point of view, explain my reasoning, and find the best solution. I believe good communication is more important than being right.

AI Interviewer · 06:30 PM Hungary Time · 12:30 PM ET

Thank you. You mentioned receiving feedback that differed from your original approach. Can you walk me through one specific instance of that, what the disagreement was about, and what you actually did in that moment?

You · 06:30 PM Hungary Time · 12:30 PM ET

...

AI Interviewer · 06:30 PM Hungary Time · 12:30 PM ET

Take your moment. Would you like me to repeat the question?

You · 06:31 PM Hungary Time · 12:31 PM ET

During my Workspace Hub project, uh, I initially focused on checking comments permission in the front end. A teammate point out the users could bypass those checks through direct IPI request. At first, I thought the front end checks were enough, but I listened and tested the IPI myself. I realized that they were right, so I added service site checks. It taught me to stay open to feedback and focus on finding the best solution.

AI Interviewer · 06:31 PM Hungary Time · 12:31 PM ET

Thank you for sharing that. Now, thinking about teamwork more broadly, tell me about a time you helped resolve tension within a team.

You · 06:31 PM Hungary Time · 12:31 PM ET

Could you repeat the question, please?

AI Interviewer · 06:31 PM Hungary Time · 12:31 PM ET

Of course. Tell me about a time you helped resolve tension within a team.

You · 06:32 PM Hungary Time · 12:32 PM ET

I haven't experienced serious tension in development team yet, but I've dealt with different opinions. During my Workspace Hub project, we had different ideas about how to handle comment permission. I listened to the feedback, tested the API, and agreed the service side checks were necessary. We focused on solving the problem rather than proving who was right.

AI Interviewer · 06:32 PM Hungary Time · 12:32 PM ET

Thank you. You mentioned that you focused on solving the problem rather than proving who was right. How did the rest of the team respond to that approach, and how did things turn out between you?

You · 06:32 PM Hungary Time · 12:32 PM ET

Uh, the discussion was constructive, and we agreed on im- the importance of service side permission checks. I focused on making the changes and testing the result. The experience helped me understand different perspective and show me how important clear communication in, when solving technical problem.

AI Interviewer · 06:32 PM Hungary Time · 12:32 PM ET

Got it. Alright, shifting gears, what professional skill are you currently focused on developing?

You · 06:32 PM Hungary Time · 12:32 PM ET

...

AI Interviewer · 06:33 PM Hungary Time · 12:33 PM ET

Are you still there? Take your time, or let me know if you'd like me to repeat the question.

You · 06:33 PM Hungary Time · 12:33 PM ET

I'm currently focused on improving my debugging and problem-solving skills. I want to become more confident in finding errors, understanding why they happen, and fixing them independently. I practice these skills through my Triple Ten projects, especially when I'm working with API and backend development.

AI Interviewer · 06:33 PM Hungary Time · 12:33 PM ET

Thank you. You mentioned wanting to become more confident finding errors independently. Can you walk me through a specific debugging situation from one of your projects where you had to work through a problem on your own, and what you did?

You · 06:34 PM Hungary Time · 12:34 PM ET

Sure. Um, yes, that was my Flashback projects. I had a problem with the practice page. Some links weren't working correctly. I checked the API response and compared it with my code. I noticed that, uh, the API used ID, but my code experi- ex- expected ID. So, I corrected the identifier and tested the page again. This experience taught me to check the data carefully and solve the prob- problems step by step.

AI Interviewer · 06:34 PM Hungary Time · 12:34 PM ET

Got it. Now, thinking about feedback you've received, what's a piece of feedback that really stuck with you, and how did you apply it?

You · 06:35 PM Hungary Time · 12:35 PM ET

Uh, yes. Uh, that's a good question. One piece of my feedback that really stay with me came from Triple 10 Code reviewers. They pointed out that my portfolio wasn't public- publicity ac- accessible because of the Vercel deployment settings. It taught me that wor- working code isn't enough if users can't acce- ac- access the application. Since then, I've paid more attention to testing projects from the user's perspective, not just checkingwhether the code works locally.

AI Interviewer · 06:35 PM Hungary Time · 12:35 PM ET

Thank you. You mentioned testing from the user's perspective after that experience. Can you give me a specific example of a time you caught something by doing that, something you might have missed if you'd only checked whether the code worked locally?

You · 06:35 PM Hungary Time · 12:35 PM ET

Yes. Um, um, absolutely. Um...

AI Interviewer · 06:35 PM Hungary Time · 12:35 PM ET

Take your time.

You · 06:36 PM Hungary Time · 12:36 PM ET

Hmm. I think a good example is my portfolio project. Uh, the website l- worked locally, but when my reviewer opened the live link, it shows the Versa login page instead of my portfolio. I hadn't noticed the problem before. It helped me to test the deploy- deployed website as a regular visitor, not just on my computer.

AI Interviewer · 06:36 PM Hungary Time · 12:36 PM ET

Thank you for sharing that. Alright, let's turn to something a bit different. Tell me about a time you had to create structure in a chaotic environment.

You · 06:36 PM Hungary Time · 12:36 PM ET

...

AI Interviewer · 06:36 PM Hungary Time · 12:36 PM ET

Take your time. Would you like me to repeat the question?

You · 06:36 PM Hungary Time · 12:36 PM ET

Yes, please.

AI Interviewer · 06:36 PM Hungary Time · 12:36 PM ET

Of course. Tell me about a time you had to create structure in a chaotic environment.

You · 06:37 PM Hungary Time · 12:37 PM ET

Uh, during my Triple 10 portfolio project, I received feedback about several technical issues. At first, it felt overwhelming, so I made a list of problem and organized them by priority. I focused on the deployment issue first because users could access the website. Breaking the work into smaller steps helped me stay organized and solve problems more efficiently.

AI Interviewer · 06:37 PM Hungary Time · 12:37 PM ET

Thank you. You mentioned organizing the problems by priority. How did you decide which issues were most important, and what did that process look like for you?

You · 06:37 PM Hungary Time · 12:37 PM ET

Sure. It's kinda step by step. I prioritized the issues based on how much they affect users. Uh, it's first, the deployment problem was the most important, uh, 'cause people couldn't access my portfolio at all. Uh, the missing favicons was less urgent 'cause it didn't affect the main functionality, so I focused on fixing access first, then moved on smaller issues, uh, slow- like step by steps. This helped me workmore efficiently.

AI Interviewer · 06:37 PM Hungary Time · 12:37 PM ET

Got it. Now, thinking about decision-making, tell me about a time you had to make a decision without having all the information you needed. How did you approach it?

You · 06:38 PM Hungary Time · 12:38 PM ET

Uh, yes. Uh, I read couple times. When I have a question, ask my teammate. And, um, during my s- workspace project, I wasn't completely sure which users should be allowed to edit or delete comments. Instead of guessing, I decided to review the requi- requirements and identify the different user roles. I discussed the unclear rules with my teammates, as I said before, um, making any changes. They'rehelp me make better decision and avoid mistakes.

AI Interviewer · 06:38 PM Hungary Time · 12:38 PM ET

Thank you. You mentioned reviewing the requirements and discussing with teammates before making changes. What happened after that, did the approach you landed on work out, and was there anything you had to adjust along the way?

You · 06:39 PM Hungary Time · 12:39 PM ET

Yes, the approach worked well. After clarifying the requirements, I made sure the permission checks match the agreed rules. Um, I actually also tested different user roles and checked the API directly, so just the service side checks were needed. Uh, this helped me, uh, make the future more s- secure and taught me the importance of clear requirements and testing.

AI Interviewer · 06:39 PM Hungary Time · 12:39 PM ET

Good. Now, tell me about a time you made a mistake at work. How did you handle it?

You · 06:39 PM Hungary Time · 12:39 PM ET

What do you mean by mistake? It's a technical mistake or...

AI Interviewer · 06:39 PM Hungary Time · 12:39 PM ET

Either works. It could be a technical mistake, a misjudgment, a missed deadline, anything where something didn't go as planned and you had to respond to it.

You · 06:40 PM Hungary Time · 12:40 PM ET

Gotcha. During my flashcard projects, I made a mistakes when I'm, when working with API data. My code expected ID, but IP returned ID, so some practice links didn't work correctly. I checked the response, found the mismatch, and correct my code. Then I tested the page again. This taught me to check API data carefully instead of making assumptions.

AI Interviewer · 06:40 PM Hungary Time · 12:40 PM ET

Thank you. Now, thinking about ownership, what project best demonstrates your ability to take ownership?

You · 06:41 PM Hungary Time · 12:41 PM ET

Uh, let me see. I have couple projects, um, during my study with Triple Ten, but I think my Workspace Hub project is a good example. I took responsibility for, um, implementing, uh, task comments across the front end, API, database. So I work on the future, test a different user permission, and make more improvements based on feedback. I wanted to make sure the future was not only working, butalso secure. This project taught me how to take ownship, ownership from development through testing.

AI Interviewer · 06:41 PM Hungary Time · 12:41 PM ET

Thank you. You mentioned making improvements based on feedback during that project. Can you walk me through one specific piece of feedback you received and what you changed as a result?

You · 06:42 PM Hungary Time · 12:42 PM ET

So, I received a feedback this checking comments permissions only the front end wasn't enough. Users could potentially bypass those checks, uh, through direct API request. I review the feedback, uh, service site permission checks, and then I tested different user roles. This helped me improve the security of the future and taught me to think beyond the user's interface.

AI Interviewer · 06:42 PM Hungary Time · 12:42 PM ET

Got it. Alright, let's turn to something a little different. Tell me about a time you identified an issue before it became a bigger problem. What did you do?

You · 06:42 PM Hungary Time · 12:42 PM ET

Are you asking about technical issue, right?

AI Interviewer · 06:42 PM Hungary Time · 12:42 PM ET

It can be any kind of issue, technical, organizational, or otherwise. Whatever comes to mind for you.

You · 06:43 PM Hungary Time · 12:43 PM ET

Well, the last one I said before, this was my Workspace Hub project, and noticed that checking comments permissions only the front end could create a security risk. Users must be able by... Mm, users must be able, um, like, to bypass those checks through the direct IP request. So, I raised, raised the concern, added service site permission checks, then tested different users' roles. So it helped prevent unauthorized changesbefore they became, like, a bigger problem.

AI Interviewer · 06:43 PM Hungary Time · 12:43 PM ET

Thank you. Now, thinking about problem-solving more broadly, walk me through a challenging problem you faced at work. How did you break it down and work toward a solution?

You · 06:44 PM Hungary Time · 12:44 PM ET

Uh, sure. One challenging problem was, was my flashcard project, so on the first one. When some practice links weren't working correctly, I broke the problem into smaller steps. First, I checked the API response, as usual. Then I compared the data with my code and noticed the API used ID, but my code expected ID. I corrected the mismatch and tested the page again. This taught me to solve problems step by step instead of changing everything at once. That was myfirst project, and it's really helped me to understand that all this pr- all this problem solved step by step, and I need to start with API response with all these projects.

AI Interviewer · 06:44 PM Hungary Time · 12:44 PM ET

Thank you. Now, tell me about a time you had to meet a tight deadline. How did you manage your time and priorities?

You · 06:44 PM Hungary Time · 12:44 PM ET

I have experienced, um, uh, during my Triple Tap program, I had to complete projects with deadlines while learning new technologies. Uh, that was starting with the flashcard projects. I broke the work into smaller task, focused on the most important feature first, and checked my progre- progress regularly. When I faced a, faced a technical problem, I focused on fixing it before moving on. This helped me to stay organized and keep making progress toward todeadline.

AI Interviewer · 06:44 PM Hungary Time · 12:44 PM ET

Thank you. You mentioned focusing on the most important features first. Can you walk me through a specific moment during one of those projects where you had to make a call about what to prioritize, and what you decided?

You · 06:45 PM Hungary Time · 12:45 PM ET

Let me think.

AI Interviewer · 06:45 PM Hungary Time · 12:45 PM ET

Take your time.

You · 06:45 PM Hungary Time · 12:45 PM ET

...

AI Interviewer · 06:45 PM Hungary Time · 12:45 PM ET

Are you still there? No rush, just let me know when you're ready.

You · 06:45 PM Hungary Time · 12:45 PM ET

Yes, yes. Can you re- repeat the question?

AI Interviewer · 06:45 PM Hungary Time · 12:45 PM ET

Of course. Can you walk me through a specific moment during one of those projects where you had to decide what to prioritize, and what you chose to focus on?

You · 06:46 PM Hungary Time · 12:46 PM ET

Well, I guess, um, I said before about API response found difference ID and ID. This is the good example. But during my portfolio project, I received feedback about two issues. Well, first one, the website wasn't public- publicly acceptable, and the fav icon was missing. I decided to focus on deployment problem first, because recruiters needs to be able to open my portfolio. I prioritized checking the Vercelsettings before fixing the smaller vis- visual issue. This helped me focus on what matters most to users.

AI Interviewer · 06:46 PM Hungary Time · 12:46 PM ET

Thank you. And finally, what strategies do you use to stay productive under pressure?

You · 06:47 PM Hungary Time · 12:47 PM ET

I think, first of all, when I'm under the pressure, I stay organized and focused on one task at a time. Uh, I break big problems into smaller steps and prioritize the most important issues. If I get lag, I check documentation or ask for help instead of wasting time. This help me stay calm, focused, and productive, even when deadlines are tight.

AI Interviewer · 06:47 PM Hungary Time · 12:47 PM ET

Thank you. You mentioned asking for help when you get stuck. Can you think of a specific time during your projects when you did that, who you turned to, and what happened as a result?

You · 06:48 PM Hungary Time · 12:48 PM ET

So the 101010 have a, uh, specific agent, AI mode. You can ask any question. It helps, like, uh, with really any issues. Um, I also reach out to a code reviewer when I needed help understanding feedback on my portfolio project. Uh, so the reviewers pointed out issues with the deployment or something like that. I reviewed their comments and used their guidance to understandwhat needed to be fixed. This, this step made to asking for help, uh, is an important part of leaving and improving my work.

AI Interviewer · 06:48 PM Hungary Time · 12:48 PM ET

Thank you. That brings us to the end of the interview. I appreciate the time you've taken to walk me through your experiences today. The interview is now complete and your responses will be scored. Best of luck to you.
